DETAILED ACTION

Election/Restrictions

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-6, 12-24 and 47, drawn to an isolated, enriched, cell free and/or recombinant nucleic acid comprising a sequence encoding for expression of a protein or peptide, and a method of using said nucleic acid.

Group II, claim(s) 7-11, drawn to an isolated, enriched, cell free and/or recombinantly produced protein or peptide.

Group III, claim(s) 25-26, drawn to a plant cell and transgenic plant.

Group IV, claim(s) 27-28, drawn to an antibody.

Group V, claim(s) 29-38 and 40-46, drawn to a specific binding material and a method of using said binding material.

Group VI, claim(s) 39, drawn to a specific binding material.

The inventions listed as Groups I-VI do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

Art Unit: 1638

A) The invention has no special technical feature that defined the contribution over the prior art, or

B) Unity of invention between different categories of inventions will only be found to exist if specific combinations of inventions are present. Those combinations include:

- 1) A product and a special process of manufacture of said product.
- 2) A product and a process of use of said product.
- 3) A product, a special process of manufacture of said product, and a process of use of said product.
- 4) A product and an apparatus specially designed to carry out said process.
- 5) A product, a special process of manufacture of said product, and an apparatus specially designed to carry out said process.

The allowed combinations do not include multiple products and multiple methods of using said products as claimed in the instant application; See MPEP § 1850.

Groups I-VI are not linked by a technical feature as nucleic acids, proteins and peptides, cells and plants, antibodies, and binding materials are different categories of products. Further, the binding material of Groups V (claim 39) and VI (claim 40) differ from one another structurally and functionally.

Applicant's claims encompass multiple inventions and do not have a special technical feature which links the inventions one to the other and they thus lack unity of invention. The claimed promoter sequences and hosts are different from one another and a separate search would be required for each.

Art Unit: 1638

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
